

COSC 6344 Visualization

(Fall 2017)

Instructor: Guoning Chen

Office: PGH 566

Email: chengu@cs.uh.edu or gchen16@uh.edu

Lecture time: Tu/Th 10~11:30AM

Location: T116

Office hours: Tu/Th 11:30AM~12:30PM or by appointment

Course web site: <http://www2.cs.uh.edu/~chengu/Teaching/>

Course summary and description:

Visualization has been established as a powerful means to help data owners from various disciplines to make sense and present their data, in order for decision making. Techniques from computer science, mathematics, cognitive and perception science, and physics are often adapted for various visualization problems. This introductory course covers topics from a number of sub-fields of visualization and aims to show students how data visualization can help find solutions to a wide range of practical data interpretation problems arising in many areas. Through this course, the students are expected to 1) get familiar with a number of important concepts and techniques/methods for the visualization of different basic types of data, and 2) foster the ability to select the proper visualization techniques when given a practical data visualization problem. This course serves as one of the core introductory level graduate courses. Together with the existing courses on imaging and computer graphics, it helps build a complete course catalog in the visual computing direction.

Topics:

- Visualization pipeline
 - Data acquisition, representation and pre-processing
- Elementary plots
- Visual perception and basic perception concepts
- Visual primitive: Colors (color theory) and Geometry
- Scalar field visualization
 - Color plots (2D) and volume rendering (3D)
 - Transfer function design
 - Iso-contouring and iso-surfacing
 - Scalar field topology
- Vector field visualization

- Direct visualization
- Geometric-based methods
- Texture-based methods
- Vector field topology
- Time-dependent vector field visualization
- Tensor field visualization
 - Glyph-based methods
 - Geometric-based methods
 - Texture-based methods
 - Tensor field topology
- Information visualization
 - Graph visualization
 - Multi-dimensional data visualization
- Evaluation of the visualization techniques
- Visual analytics

Prerequisites: You are expected to have basics knowledge on linear algebra, linear systems, calculus, geometry, numerical analysis, and programming languages. Homework assignments and course projects will require knowledge of C/C++ and OpenGL library. Minimal familiarity with computer graphics principles and techniques is assumed. Having taken COSC 6372: Computer Graphics is ideal but not required.

Textbooks (recommended, but not required)

Visualization techniques are highly application dependent and highly diversified! There is currently no a good book that can summarize all available techniques. However, the following textbooks provide a good introduction to some well-established techniques for a number of fundamental visualization problems.

- Data Visualization: Principles and Practice. Alexandru C. Telea, A.K. Peters, 2008.
- Introduction to Information Visualization. Riccardo Mazza, Springer, 2009.
- Charles D. Hansen and Chris R. Johnson, Visualization Handbook, Elsevier, 2004.

Reading Materials:

A collection of recent papers in visualization from the major conferences and journals.

Grading:

Project assignments – 50%

Mid-term exam – 20%

Final project – 25%

In-class participation (including discussion and presentation of papers and projects) - (5%)

A student needs to score on average **at least 60% in total to pass the class.**

Late Policy

Late assignments will be marked off **20% for each weekday** that it is late. **Each student can ask for the extension of one assignment up to 5 working days.**

Academic Dishonesty

Please do your own work. The default consequence for academic dishonesty is a failure for the course. It is okay to discuss with other students general ideas about implementing a program. It is NOT okay to copy another student's program. It is okay to discuss possible program bugs. It is NOT okay to debug another student's program.

Expectations

Students are expected to attend lectures, participate in the discussions, and complete project assignments on time. You should come to class prepared and speak up when something is not clear. Being prepared means completing the assigned reading and project assignments. Students are expected to be creative and have fun!

Students with Disabilities

Students with documented disabilities who may need accommodations, who have any emergency medical information the instructor should be aware of, or who need special arrangements in the event of evacuation, should make an appointment with the instructor as early as possible, and no later than the first week of the semester. Class materials will be made available in an accessible format upon request.

Counseling and Psychological Services (CAPS) can help students who are having difficulties managing stress, adjusting to the demands of a professional program, or feeling sad and hopeless. You can reach

CAPS (www.uh.edu/caps) by calling [713-743-5454](tel:713-743-5454) during and after business hours for routine appointments or if you or someone you know is in crisis. No appointment is necessary for the “Let's Talk” program, a drop-in consultation service at convenient locations and hours around campus. http://www.uh.edu/caps/outreach/lets_talk.html

Tentative schedule

TIMELINE	MATERIAL COVERED
WEEK 1 (08/22, 24)	<u>Class Preliminaries</u> Introduction – History of visualization, Visualization pipeline; OpenGL tutorial
WEEK 2 (08/29, 08/31)	Data type and data representation; Elementary plots (Assignment 1 out);
WEEK 3 (09/05, 07)	Colors in visualization; Color coding for scalar data visualization (Assignment 2 out);
WEEK 4 (09/12, 14)	Iso-contouring/ Iso-surfacing; Direct volume rendering – Ray casting (Assignment 3 out)
WEEK 5 (09/19, 21)	Direct volume rendering – Splatting, Transfer function design (Assignment 4 out)
WEEK 6 (09/26, 28)	Flow visualization introduction; Flow visualization techniques in 2D (arrow and color plots and streamlines)
WEEK 7 (10/03, 05)	Mid-term review; Mid-term exam (TBD) (IEEE Visualization 2017)
WEEK 8 (10/10, 12)	Flow visualization techniques in 2D - texture-based(Assignment 5 out); Topology-based vector field visualization I
WEEK 9 (10/17, 19)	Topology-based vector field visualization II; Final project topic review
WEEK 10 (10/24, 26)	Non-topological feature-based flow visualization; 3D flow visualization; Final project proposal due (Assignment 6 out)
WEEK 11 (10/31, 02)	Unsteady flow visualization; Tensor data application – introduction and math; Geometric-based and texture-based tensor visualization;
WEEK 12 (11/07, 09)	Glyph-based technique (Assignment 7 out); Tensor field topology
WEEK 13	Information visualization – graph and hierarchy data visualization

(11/14, 16)	
WEEK 14 (11/21)	Information visualization – high dimensional data visualization; Multi-field visualization Thanksgiving
WEEK 15 (11/28, 12/02)	Final project presentations
WEEK 16 (12/05, 07)	Final week; No class
